Introduction:

The Project Development Phase focuses on converting the planned design of the **EventForce Management System** into a functional web application. The major modules were developed and integrated based on the requirements identified in the previous phases.

Development Activities:

The following major activities were completed:

- Developed **User Registration and Login** functionality.
- Developed the **Event Management** module for creating, updating, and managing events.
- Implemented **Event Registration** for participants.
- Developed **Participant Management** functionality.
- Created **Admin and Participant Dashboards**.
- Designed and connected the **MySQL database** for storing users, events, and registration details.
- Integrated the frontend, backend, and database.
- Performed debugging and corrected development errors.

Technologies Used:

Component	Technology
Frontend	HTML, CSS, JavaScript
Backend	Python Flask
Database	MySQL
Development Tool	Visual Studio Code

Module Integration:

The major modules were integrated into a single system:

User Management → Event Management → Event Registration → Participant Management → Dashboard → MySQL Database

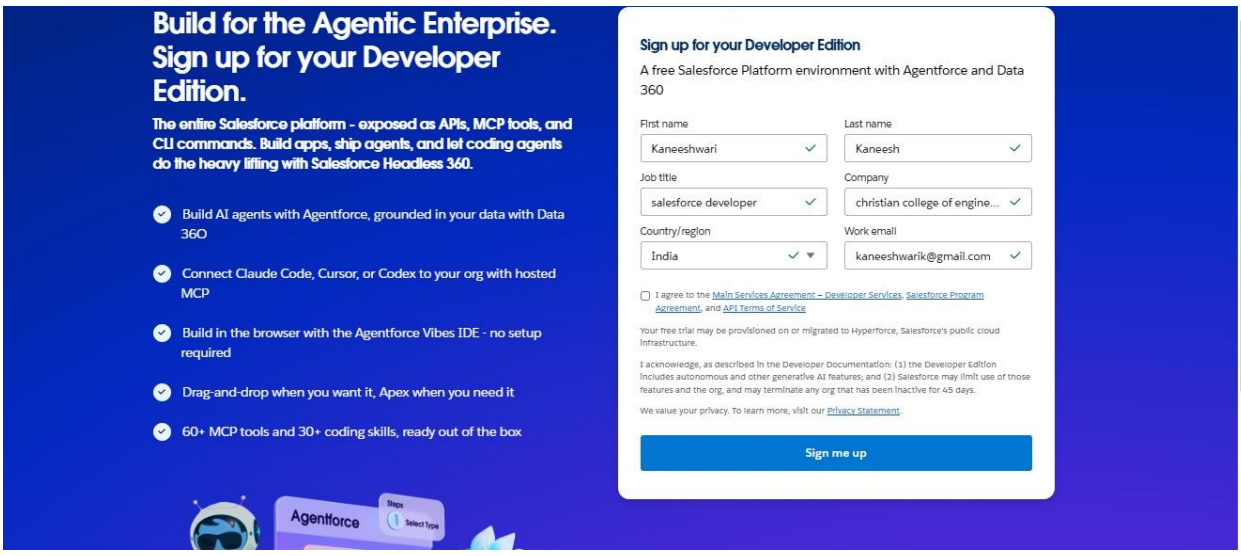

This integration enables smooth data flow between users, events, and registrations.

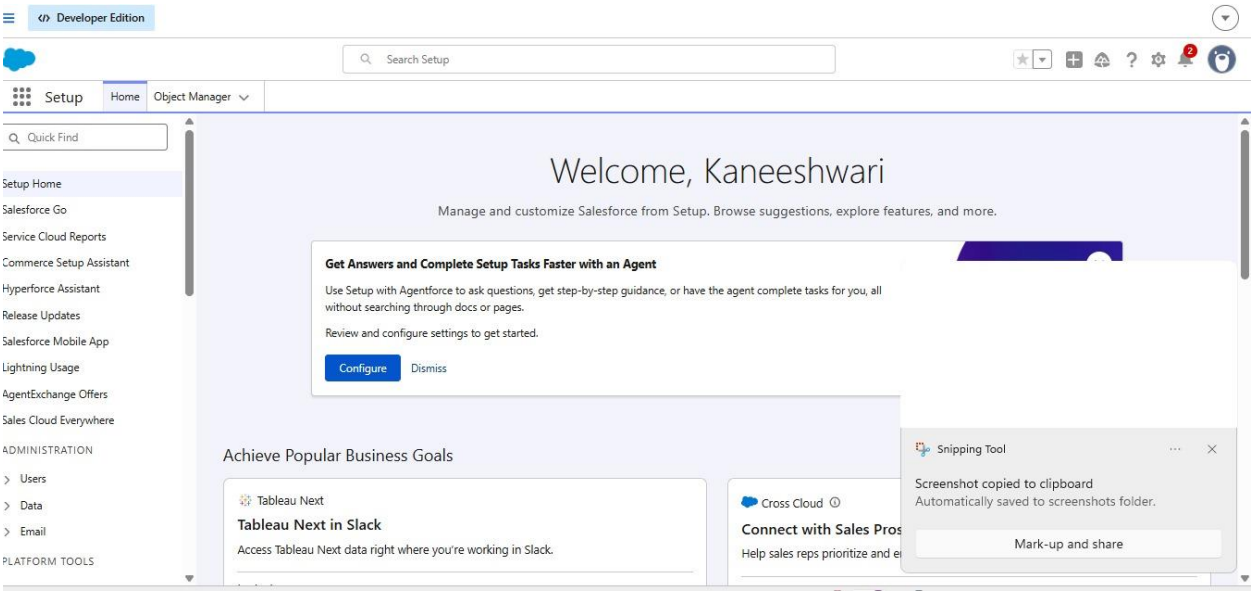

Expected Outcome:

The outcome of this phase is a **functional EventForce Management System** with its core features developed and integrated using **HTML, CSS, JavaScript, Python Flask, and MySQL**. The completed system is ready for the **Testing Phase**.

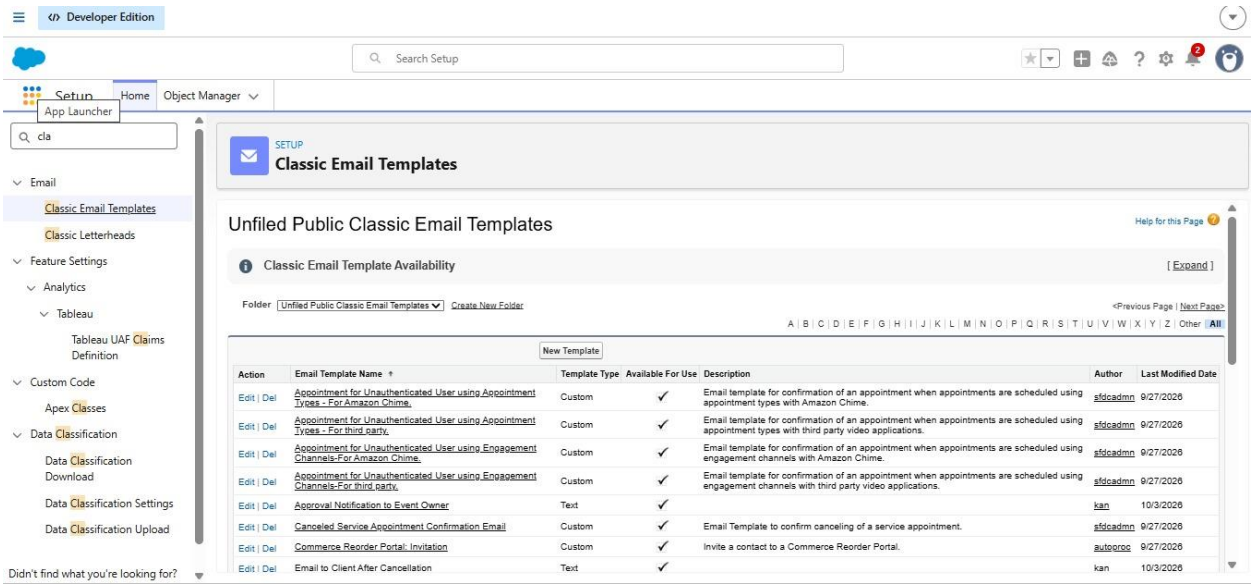

OUTPUT:

Creating salesforce account :

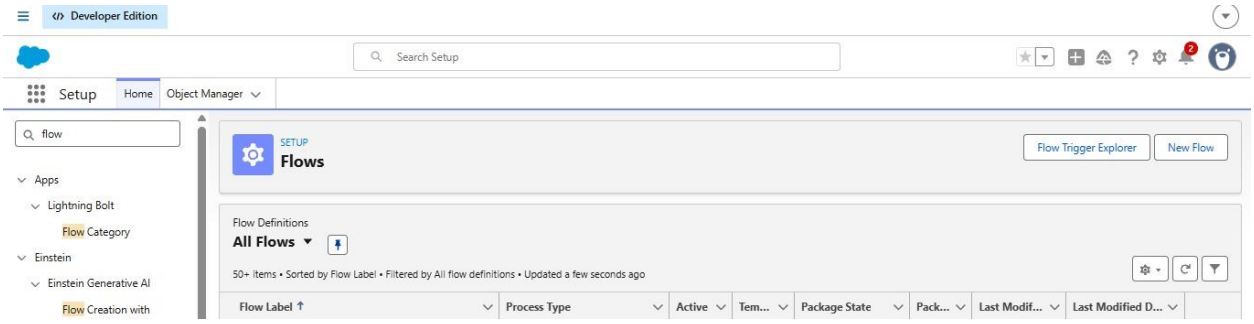

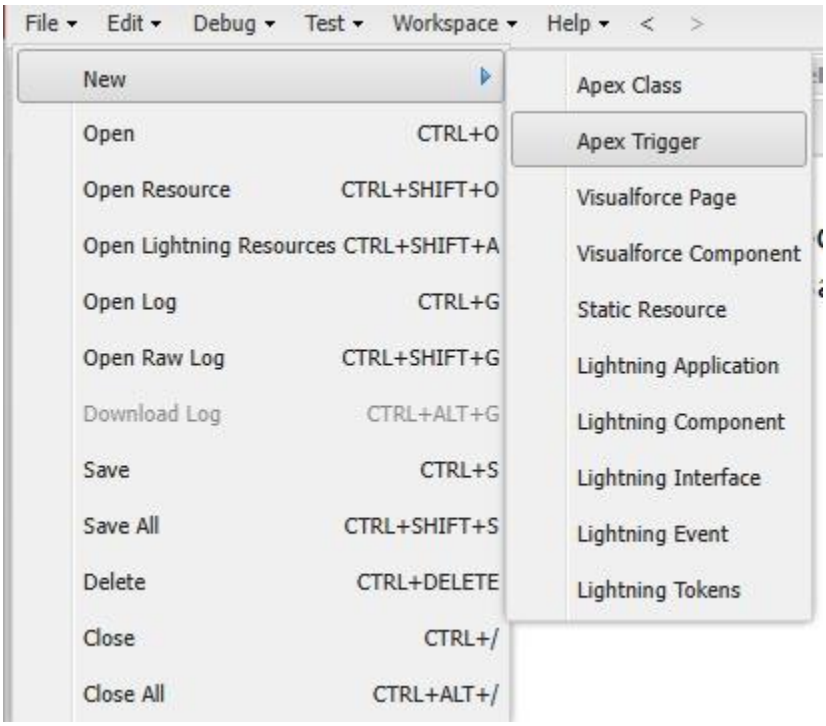

Create classic e-mail Template

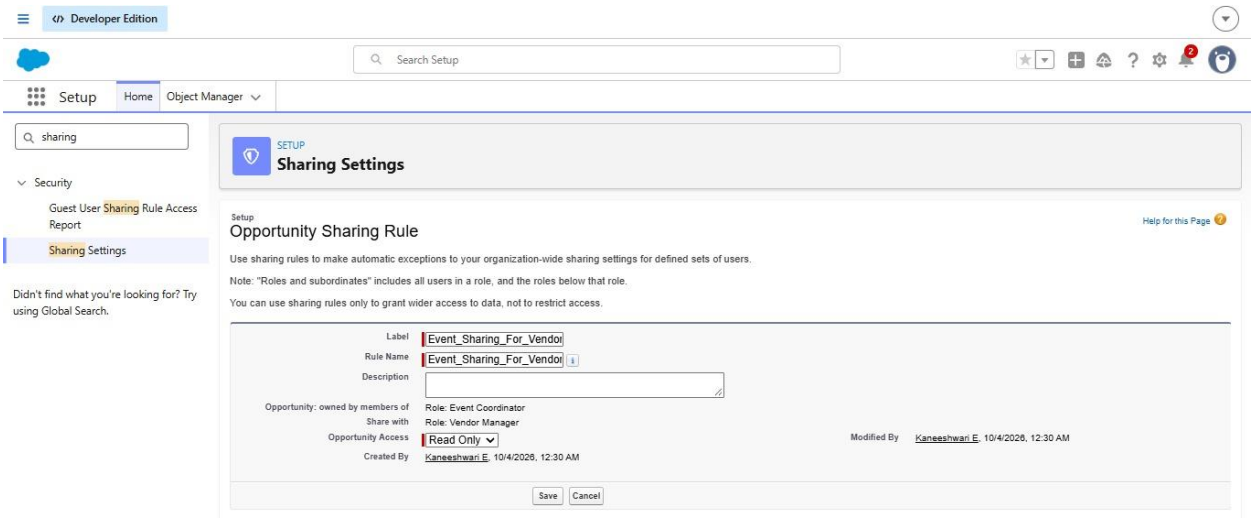

Flows

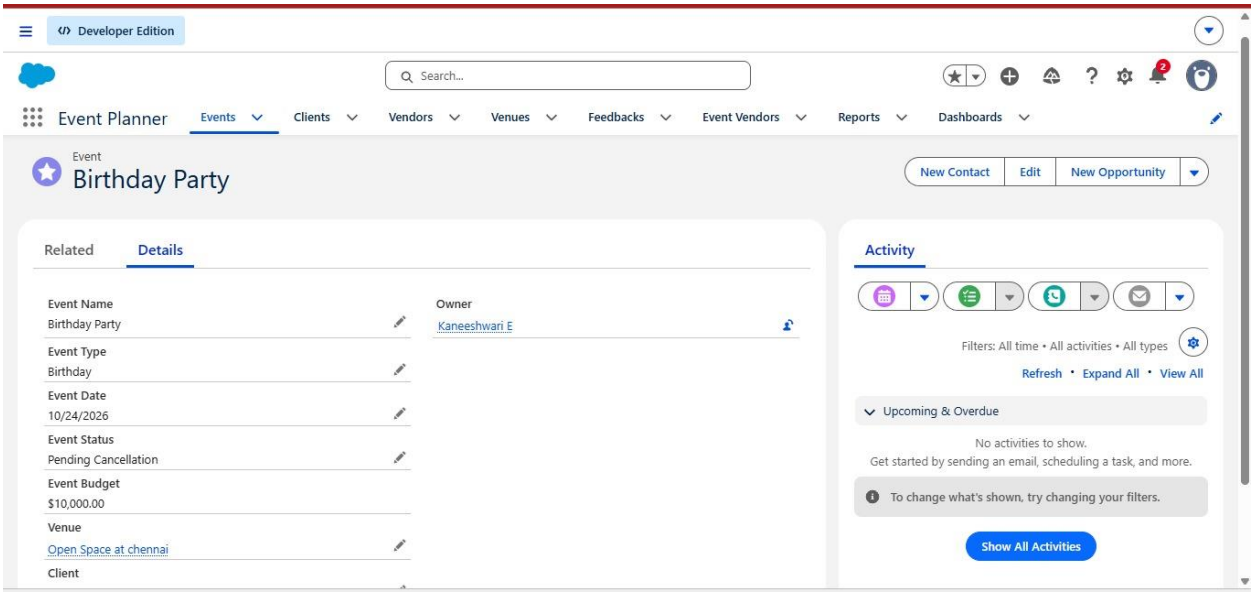

Apex classes

Create sharing rule :

Output

DEPLOYMENT, DOCUMENTATION & MAINTENANCE:

Deployment

Deployment is the process of making the completed **EventForce Management System** ready for use.

The major deployment activities include:

- Configure the application environment.
- Connect the **Python Flask** backend with the **MySQL** database.
- Verify frontend and backend integration.
- Test the application in a web browser.
- Ensure that users and administrators can access the required features.
- Perform final checks before making the system available for use.

Documentation:

Documentation provides a complete record of the development and functionality of the EventForce Management System.

The project documentation includes:

- Project introduction and problem statement
- Objectives and proposed solution
- Requirement analysis
- System design
- Project planning and scheduling
- Development activities
- Database and module details
- Testing and results
- Deployment details
- Conclusion and future enhancements

Proper documentation helps users and developers understand the system and its implementation.

Maintenance:

Maintenance ensures that the EventForce Management System continues to work efficiently after deployment.

The major maintenance activities include:

- Fixing errors and bugs identified after deployment.
- Updating event and user information when required.
- Maintaining and backing up the MySQL database.
- Improving system security.
- Updating the application when new requirements arise.
- Monitoring system performance.
- Adding new features and enhancements when necessary.

FUNCTIONAL & PERFORMANCE TESTING:

The **EventForce Management System** was tested to verify whether the main features and functionalities work correctly.

- User registration and login functionality were tested.
- Event creation, updating, and management were verified.
- Event registration and participant details were checked.

- Database operations and data retrieval were tested.
- Admin and participant access permissions were verified.
- Dashboards and event information were checked for proper functionality.

ADVANTAGES:

- Centralized event and participant information.
- Easy online event registration.
- Reduces manual event management work.
- Improves participant and event record management.
- Provides quick access to event details.
- Simplifies event management for administrators.

DISADVANTAGES:

- Requires accurate user and event data.
- Depends on proper database and system configuration.
- Requires internet access for web-based functionality.
- System maintenance is required for long-term operation.

FUTURE SCOPE:

The future improvements of the **EventForce Management System** include:

- Add automated notifications and reminders for upcoming events.
- Implement online payment for paid events.
- Add QR code-based event check-in and attendance tracking.
- Provide advanced event and participant analytics.
- Develop a mobile application for easier access.

- Add AI-based event recommendations for participants.

CONCLUSION:

The **EventForce Management System** provides a centralized digital solution for creating, managing, and registering for events. It uses **HTML, CSS, JavaScript, Python Flask, and MySQL** to manage event and participant information efficiently.

The system helps simplify event registration, reduce manual work, maintain organized records, and provide easy access to event information. Overall, EventForce improves the efficiency and convenience of event management for both **administrators and participants**.
